Lab 2

Lab 2

- Upgrade your homepage by applying CSS

- Create your homepage_layout.css stylesheet

- All the styles for appearance should be defined in the CSS file, not in the HTML file.

Requirement 1

- Arrange your page into sections
- Organize homepage.html by adding **ids**, **classes**, **spans** and **divs** as seen in lecture. Then, add "boxes" around these sections of the website.
- The border of a box should be defined like this:

  border: *thickness color style*;
- Have at least one green border and one blue border

Requirement 2

- You are now going to add padding, margins, and backgrounds to some of the parts you defined in Requirement 1.

- The box with the green border should have a background color of white.

- The boxes with the blue borders should have a background color of #E8FBFB. It should have a padding of 5px (on all sides) and margin of 10px only on the *top* of the box.

- Add a background image to one of the other sections

Requirement 3

- Apply **float** and **clear** on the web page
- Your image should hover on the *right* side next to the surrounding text

Requirement 4

- Have a second column to show a list of your favorite links (e.g., friends list)

- Use CSS to make this list into a left-aligned column. You can choose any color, border, etc. for the list.

Requirement 5

- Write your page so that if you hover over any element (i.e. any header, paragraph, image, etc), the element is highlighted in yellow.

Lab 2

- Use a browser to view your page

https://webpages.scu.edu/<username>/homepage.html

- Validate your CSS at

jigsaw.w3.org/css-validator/

- Validate your homepage at

http://validator.w3.org/
